Art Unit: 4171

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-4 in the reply filed on 07/21/2008 is acknowledged. Examiner notes that since the applicant did not provide any arguments the restriction is considered without traverse and is made FINAL.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "a base" from claim 1, line 6 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an

Art Unit: 4171

application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claim 2-4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 2, Applicant recites on page 24, line 1: "said knock pin for positioning said pinion drive device..." It is unclear whether this knock pin is the same as the one referred to in claim 1. The one in claim 1 is for positioning the swing frame. Is the applicant trying to claim two separate knock pins?

Regarding claim 4, if the applicant is referring to the second knock pin in this claim then there is a lack of antecedent basis for the "said fit-in hole". Is applicant referring to the second knock pin?

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 4171

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamamoto et al. (JP0926800A; Using machine translation).

(The reference numerals and explanations within parenthesis relate to the prior art)

Applicant claims a swing mechanism (fig.1, 3) comprising:

Regarding claim 1,

- A swing frame (fig.1 or 2, element 4),
- An inner race (fig.2, 6) having an internal gear (fig.2, 6a) on an inner circumferential portion thereof and mounted on a side of a base (fig.2, the base of the swing frame can be considered a base)
- An outer race (fig.2, 7) rotatably arranged surrounding said inner race and provided with said swing frame mounted thereon (see fig.2),
- A pinion (fig.2, 12) inserted through a pinion insertion hole (not labeled but clearly seen in fig.2; hole in swing frame through which pinion protrudes) formed in said swing frame and maintained in meshing engagement with said internal gear,
- > A pinion drive device (fig.2, 11) for rotationally driving said pinion,
- A pin fit-in hole (fig.10X, 10f) arranged in said swing frame such that a knock pin (fig.10X, 19) fixed on said outer race is fitted in said pin fit-in hole to position said swing frame (see fig. 10X),
- A pin fit-in hole portion (see fig.10X; the general area where the pin is located is considered the portion) through which said pin fit-in hole is formed is arranged on

Art Unit: 4171

said swing frame at a location in a vicinity of a place of meshing engagement between said pinion and said internal gear (fig.10X, shows it's in a vicinity of the gearing) such that said pin fit-in hole portion extends toward said pinion insertion hole (fig.10X; shows the portion extends toward the hole which is very close to it) and said pin fit-in hole is located on or in a vicinity of a line that extends through a center of rotation of said outer race and center of rotation of said pinion (not explicitly shown in the drawings, but it is clear that since the pin is near the gearing it would be in the vicinity of a line extending through the centers of rotations of the outer race and pinion).

Regarding claim 2,

- Said knock pin (fig.10X, 19) is arranged between said swing frame and said pinion drive device (seen in fig.2 and 10X).
- A center of said knock pin for positioning said swing frame being fitted in pin fit in hole (fig.10X,19) and a center of a knock pin for positioning said pinion drive device (fig.10Y, 18) are each located on or in a vicinity of a line that extends through said center of rotation of said outer race and said center of rotation of said pinion (these pins are in the vicinity of gearing, thus they are in the vicinity of the lines, see fig.9 or 10X-Y).

Regarding claim 3,

Said pin fit-in hole is arranged in a center frame (see fig.10X, hole 10f is in center frame 10) of said swing frame.

Regarding claim 4,

Application/Control Number: 10/551,839

Art Unit: 4171

A fit-in hole (fig.10Y, 17e) in which said knock pin for positioning said pinion drive device is fitted is arranged through a flange potion of said pinion drive device (fig.10Y, 17) and a bracket for mounting said pinion drive device (fig.10Y, 16; examiner interprets the spacer from the translation to be a bracket).

Above figures- Yamamoto et al.'s device.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Prior art is related to similar swing mechanisms that have adjustability for backlash.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas Diaz whose telephone number is (571)270-5461. The examiner can normally be reached on Monday-Thursday 7:30am-6:00pm, Friday's off..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Larry Tarazano can be reached on (571)272-1515. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
